

users, sponsors, bug squashers, NMUers

use dgit maybe worth learning git for

it will make your life massively easier

dgit_2.11_all.deb compatible back to ?wheezy

maintainers

please use dgit if you can

it can improve your workflow

it will help users, NMUers, etc.

when you **can't** use dgit as a maintainer

You don't want to use git

Your git trees are funny: separate packaging repo;
git submodules; all filenames rot13d; etc.

You're using the upstream .orig,
and your git tree lacks some of the files in the .orig

The trouble here is a bug in our source package formats;
I have a plan to fix it, but it's late :-/ and
I could do with some help
